

Mini Project Assessment: Configuring an ERP System with WebERP

Objective: To configure a basic ERP system using WebERP software by creating an organization and performing essential configurations.

Project Requirements

1. Create an organization

- 1.1. Set up a new organization within the WebERP system.
- 1.2. Enter basic details such as organization name, address, and contact information.

2. Basic Configurations

- 2.1. User Management: Create at least two user accounts with different roles and permissions.
- 2.2. Financial Settings: Configure the basic financial settings including currency, fiscal year, and chart of accounts.
- 2.3. Inventory Settings: Set up basic inventory settings including item categories, units of measure, and a few sample items.
- 2.4. Sales and Purchase Configuration: Configure basic settings for sales and purchase, including sales tax rates and vendor management.

3. Detail Configurations: ERP Configurations List

1. Organization Setup

1.1.	Company Details	Name, address, contact information, and logo.
1.2.	Business Units	Define departments, branches, or locations if applicable.
1.3.	Legal Settings	Tax identification numbers, and legal entity details.

2. User Management

2.1.	Roles and Permissions	Define roles (e.g., admin, manager, employee) and assign permissions.
2.2.	User Accounts	Create user profiles and assign them to roles.

3. Financial Settings

3.1.	Currency Configuration	Set up the default currency and additional currencies if necessary.
3.2.	Fiscal Year Setup	Define fiscal periods, and start and end dates.
3.3.	Chart of Accounts	Configure account types (assets, liabilities, equity, revenue, expenses) and create account codes.
3.4.	Bank Accounts	Set up bank accounts for transactions.
3.5.	Tax Settings	Configure tax rates and tax codes.

4. Inventory Management

4.1.	Item Categories	Define categories or groups for inventory items.
4.2.	Units of Measure	Set up units of measure (e.g., pieces, kilograms).
4.3.	Inventory Items	Add sample items, and define attributes (e.g., SKU, description).
4.4.	Warehouse Locations	Configure storage locations and their details.

5. Sales Management

5.1.	Customer Management	Set up customer profiles, categories, and pricing groups.
5.2.	Sales Tax Rates	Define sales tax rates and rules.
5.3.	Sales Order Processing	Configure settings for order entry, invoicing, and fulfillment.
5.4.	Discounts and Promotions	Set up discount rules and promotional pricing.

6. Purchase Management

6.1.	Vendor Management	Create vendor profiles and categorize them.
6.2.	Purchase Tax Rates	Define purchase tax rates and rules.
6.3.	Purchase Order Processing	Configure settings for creating and managing purchase orders.
6.4.	Supplier Agreements	Set up supplier contracts and agreements.

7. Human Resources

7.1.	Employee Profiles	Create employee records with personal and job-related information.
7.2.	Payroll Settings	Configure payroll settings, including pay periods, salary structures, and tax deductions.
7.3.	Leave Management	Set up leave types, accrual policies, and approval workflows.

8. Project Management

8.1.	Project Setup	Define project types, stages, and tasks.
8.2.	Resource Allocation	Assign resources to projects and manage project budgets.

9. Manufacturing (if applicable)

9.1.	Bill of Materials (BOM)	Define the components and materials needed for production.
9.2.	Work Orders	Set up work order processes and production schedules.
9.3.	Production Tracking	Configure settings for tracking production progress and quality.

10. Customer Relationship Management (CRM)

10.1	Lead and Opportunity Management	Configure settings for managing sales leads and opportunities.
10.2	Campaigns	Set up marketing campaigns and track their performance.

11. Reporting and Analytics

11.1.	Report Templates	Create templates for standard reports (e.g., financial statements, sales reports).
11.2.	Dashboards	Configure dashboards to display key performance indicators (KPIs) and metrics.

12. Security and Backup

12.1	Data Backup	Configure regular data backup schedules and storage.
12.2	Security Settings	Define security protocols, data encryption, and access controls.

Submission Requirements

Provide a brief documentation of the configurations made. Include screenshots where necessary to illustrate the setup process. Explain any choices or assumptions made during the configuration. Learners can include any features other than the given list.

Database File: Submit the database file (.sql) containing the created configurations via the provided submission link.

Assessment Criteria

1. Completeness (40%)
2. Accuracy (30%)
3. Documentation (20%)
4. Creativity and Additional Features (10%)

Ensure that both the database file and documentation are uploaded to the submission link by 20 October 2024.
